SUMMARY

Frontend Engineer with 5+ years of experience building scalable, high-performance web and mobile applications across SaaS, fintech, e-commerce, and investment platforms. Specialised in React, React Native, TypeScript, and real-time systems with a strong command of state management, API integration, and component architecture. Proven ability to own the full frontend experience in fast-moving environments, shipping clean, tested, production-grade code on tight timelines. Comfortable working directly with leadership, contributing to product decisions, and taking initiative without a playbook.

WORK EXPERIENCE

Frontend Developer · AfriStakes (Contract, Remote)

Feb 2026 – Apr 2026

AfriStakes is a structured capital platform connecting African businesses with investors — enabling individuals and institutions to identify, structure, and invest directly in businesses across different stages.

- Wrote the majority of the frontend codebase from the ground up, delivering a fully functional investment platform within a short contract window.
- Built real-time features using WebSockets and Pusher — including live notifications, deal status updates, and messaging between investors and businesses.
- Architected complex data-heavy interfaces using TanStack Table for investment listings, deal pipelines, and portfolio views with sorting, filtering, and pagination.
- Implemented type-safe, file-based client-side routing using TanStack Router, structuring navigation across investor dashboards, business profiles, and deal flows.
- Wrote component and integration tests to ensure reliability across critical investment and user management flows.
- Optimised rendering performance for data-dense views — minimising re-renders and ensuring smooth UX across high-volume tabular interfaces.
- Delivered independently and remotely, communicating directly with leadership and meeting all milestones on schedule.

Frontend Developer · Stratsight (Strategy SaaS)

Jun 2024 – Jan 2026

Enterprise strategic planning and performance management platform for C-suite and executive teams.

- Architected MissionSync from scratch — an enterprise SaaS platform with 190+ React components, 97+ pages, and 50K+ LOC using React 18, TypeScript, Redux Toolkit, and React Query.
- Built dynamic role-based onboarding flows (CEO, C-Level, Manager) with real-time progress tracking and safe state invalidation patterns.
- Designed a hybrid state management layer combining Redux and React Query — enabling live data synchronisation and eliminating all manual page-refresh requirements.
- Built AI-powered mission suggestion features with multi-step flows, file upload support, streaming responses, and comprehensive error handling.
- Integrated dual API versioning (V1/V2) with centralised error handling and automatic token refresh logic for seamless backward compatibility.
- Delivered a 190+ component Tailwind CSS library that accelerated feature rollout by 30% and cut code duplication by 40% across 15+ modules.
- Led performance optimisation — achieving 25% faster load times through code splitting, caching strategies, lazy loading, and React.memo usage.
- Deployed via Netlify with Vite, PostHog analytics, React Secure Storage, and error boundaries; maintained test coverage with @testing-library/react.

Software Developer · Simonsaysdrip

Nov 2023 – Apr 2024

Fashion e-commerce brand with full online retail operations.

- Developed full-stack e-commerce features using React.js and PHP — covering browse, cart, checkout, and payment integration end-to-end.
- Achieved 95 Lighthouse performance score through image optimisation, script bundling, and PWA implementation.
- Architected Shopify API integrations for product catalogue, inventory management, and order processing with real-time sync.

- Built a comprehensive user account system — profile management, order history, wishlist, and personalised product recommendations.

Frontend Developer · Bluelight Agency

Apr 2020 – Jan 2023

Digital product studio delivering web solutions for clients across multiple industries.

- Designed and built responsive web applications for diverse clients using React.js, GSAP, and Framer Motion for rich, animated experiences.
- Built custom component libraries and standardised UI patterns — cutting development time by 25% across projects.
- Improved UI performance by 20% through bundle size reduction, React.memo, and lazy loading.
- Integrated RESTful APIs and third-party services: payment gateways, Google Analytics, and social media APIs.
- Translated Figma and Adobe XD designs into WCAG-compliant, pixel-perfect implementations with cross-browser support.

PROJECTS

AfriStakes <https://afristakes.com>

Structured capital platform connecting African businesses with investors. Features real-time deal updates via WebSockets/Pusher, complex investment dashboards built with TanStack Table, and type-safe routing via TanStack Router.

Role: Lead Frontend Developer — built majority of frontend on a remote contract engagement

MissionSync <https://mission-sync.com>

Enterprise strategic planning and performance management SaaS for executive teams. 190+ components, 97+ pages, AI-assisted features, and real-time state sync.

Role: Founding Frontend Developer — responsible for 70% of the codebase

Beeva AI <https://beeva.ai>

AI-powered skincare platform where users upload a selfie to receive personalised skin analysis and care recommendations.

Role: Architected and developed the full frontend in React and TypeScript

Bluelight Studios <https://bluelight.studio>

Digital studio delivering custom software solutions across industries — web apps, landing pages, and client-facing platforms.

Role: Developed and shipped multiple production web applications to client specifications

Folawej Laundromat <https://folawej.com>

Consumer platform for a laundry service with self-service facilities, coin-operated machines, and mobile app integration.

Role: Maintained frontend codebase with continuous feature updates and integrations

TECHNOLOGIES

Frontend: React.js, React Native, Next.js, TypeScript, JavaScript, HTML5, CSS3, Vue.js

State Management: Redux Toolkit, Redux Persist, TanStack Query (React Query), Zustand, Context API, SWR, Custom Hooks

Real-time & APIs: WebSockets, Pusher, REST APIs, GraphQL, Axios

Tables & Routing: TanStack Table, TanStack Router, React Router

Styling: Tailwind CSS, Styled Components, SCSS/SASS, CSS Modules, GSAP, Framer Motion

Testing: Jest, React Testing Library, Cypress, @testing-library/react

Tools & DevOps: Vite, Webpack, Git, Zod, GitHub Actions, Netlify CI/CD, Vercel, Docker Basics

EDUCATION

BSc Building Technology

University of Lagos, Lagos State

Feb 2019 – Aug 2025

BSc Computer Science

University of the People, California (Online)

Dec 2021 – Dec 2026
